MÜLLER MOTORCYCLE AG

Riser / Lenkerhalter

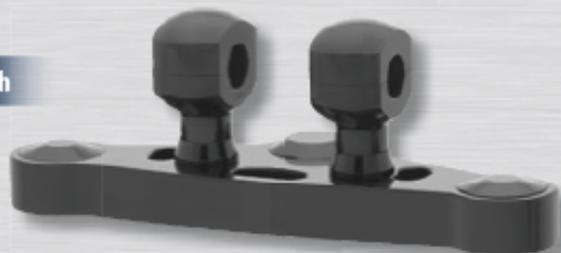

Zur Erweiterung unseres Programms und als Ergänzung zu unseren Motorradlenkern haben wir von der Firma Müller Motorcycle AG die Produktlinie der Riser übernommen. Die Riser haben eine schöne Optik und sind sauber verarbeitet. Die Riserdeckel sind unsichtbar von unten verschraubt. Gefertigt aus hochfestem Flugzeugaluminium. Damit haben Sie ihren Lenker jederzeit fest im Griff.

Die Riser gibt es für 25,4 mm (1") und 31,75 mm (1 ¼") Lenker, in 50, 75 und 100 mm Höhe, in poliert oder schwarz eloxiert. Mit 1/2" UNC Gewinde.

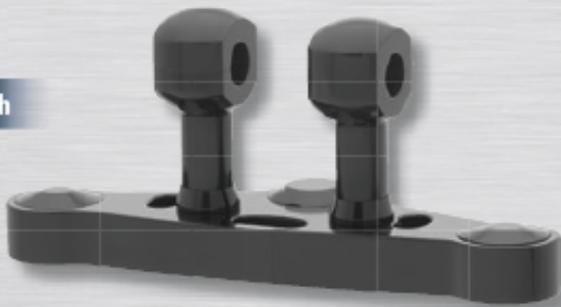

Für die Riser gibt es ein Teillegutachten zur Eintragung nach § 19 (3)

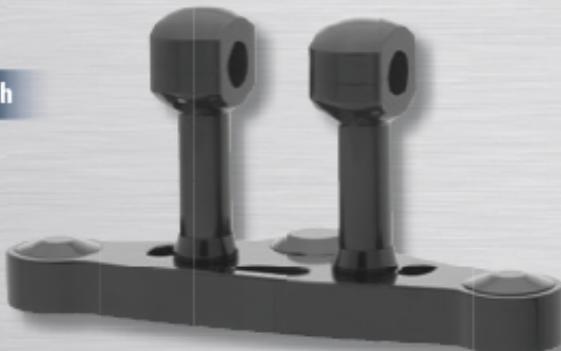

Riser 50 mm hoch

Riser 75 mm hoch

Riser 100 mm hoch

Handlebar holder / Riser

To expand our product range and as a supplement to our motorcycle handlebars, we have taken over the riser production line from Müller Motorcycle AG. The risers have a beautiful appearance and are neatly finished. The riser covers are invisibly screwed from below. Made of high-strength aircraft aluminium. So you always have a firm grip on your handlebars.

Our Riser exist for **25,4 mm (1")** and **31,75 mm (1 ¼")** handlebars, in **50, 75 and 100 mm** Height, in polished or black anodised. With 1/2" UNC thread.

All our Riser inclusive Technical Report for registration pursuant § 19 (3).

T-Bars

T-Bar handlebar with thread in the vertical tubes (hole distance 100 mm). The handlebars are mounted with a screw on the triple tree. The screw must be mounted from below through the triple tree inside the vertical handlebar tubes. For some motorcycle models we have mounting kits, for other models you have to make the mounting like the description of the TÜV-technical report.

T-Bars

T-Bar handlebar with thread in the vertical tubes (hole distance 100 mm for many Japanese bikes). The handlebars are mounted with a screw from below on the triple tree. For some motorcycle models we have mounting kits, for other models you have to make the mounting like the description in the TÜV-technical report.

Information on handlebars, risers and technical reports

Handlebar recommendation:

The choice of handlebars depends on the physical characteristics of the rider, the desired riding position and other factors and add-on parts such as risers, triple clamps, footrest system, seat, handlebar riser kits etc.. For this reason, we cannot make any recommendations when selecting handlebars.

Does the handlebar fit with the original brake lines, cables and electric cables?

We have no information about which handlebars can be fitted on which motorcycle with the original brake lines, cables and electric cables, or whether they need to be extended. We recommend that you seek advice from an experienced workshop.

Handlebars with ABE (without approval) are an exception. In this case, the handlebars fit the motorcycles listed in the usage list without further modifications if the motorcycle is in its original condition.

Mounting the fittings:

Our handlebars have no holes for fixing the fittings and no threads for handlebar weights. Depending on the desired position of the fittings, holes for fixing the fittings must be drilled by the rider.

Commercially available handlebar weights with a clamping device can be fitted.

Shortening the grip ends on our handlebars:

We have no objections to shortening the handlebar ends. The prerequisite is that the grip ends are shortened by the same length on both sides and that the remaining grip piece is long enough to accommodate the fittings.

We recommend that you discuss any shortening with the inspector beforehand. If the installation instructions listed in the TGA / TB are observed, we have no objections to registration.

Handlebar holder / riser:

The clamping diameter must correspond to the handlebar diameter.

Expert technical reports:

You can download current TGA / TB on our website under "Service". In each TGA / TB you will find a list of the points that need to be observed during a conversion.

Some handlebars are supplied with 2 certificates. In the TGA the handlebar is tested, in the TB the extension for the special variant of the handlebar is included or an alternative type number.

On the reverse you will find a list of the different types of certificates with information on which inspectors are permitted to carry out the registrations.

Dimensions: Technical dimensions

- a Overall width
- b Height at the end of the outer bend, with vertical handlebars.
(The dimensions in the mounting position may vary considerably)
- c Depth to the rear, with vertical handlebars.
(The dimensions in the mounting position may vary considerably)
- d Height at the end of the grip, with handlebars in vertical position.
(The dimensions in the mounting position may vary considerably)
- e Measured at the intersection of the outer edges of the tubes

1. TB (Technical Report) according to § 19/2

The inspectors of TÜV, Dekra, GTÜ and other organizations who are trained as
AAS (Officially recognized expert)
AASMT (Officially recognized expert with partial authorization)
USB (Authorized Technical Service)
may carry out an attachment test with individual assessment.

2. TGA (with restriction to certain motorcycle models) according to § 19/3.
(From 2004, new TGAs may only be created with the restriction to certain motorcycle models)**a. The motorcycle is listed for the handlebars**

The inspectors of TÜV, Dekra, GTÜ and other organizations who have been trained as
AAS (Officially recognized expert)
AASMT (Officially recognized expert with partial authorization)
USB (Authorized Technical Service)
PI (Test engineer)
are authorized to carry out an attachment test.

b. The motorcycle is not listed for the handlebars

The inspectors of TÜV, Dekra, GTÜ and other organizations who have been trained as
AAS (Officially recognized expert)
AASMT (Officially recognized expert with partial authorization)
USB (Authorized Technical Service)
may carry out an attachment test with individual assessment.

3. TGA (without restriction to motorcycle models) according to § 19/3
(Until the end of 2003, TGAs could be issued without restriction to certain motorcycle models)

These parts certificates have the intended use "universal" according to
handlebar tube diameter and / or
Motorcycles with vehicle and body type
09 (motorcycle, light motorcycle, moped, mokick),
19 (motorcycle with sidecar)
25 (motorcycles)
and are not restricted to certain motorcycle models.

The inspectors from TÜV, Dekra, GTÜ and other organizations who have been trained as
AAS (officially recognized expert)
AASMT (officially recognized expert with partial authorization)
USB (Authorized Technical Service)
PI (test engineer)
are authorized to carry out an attachment test.

4. ABE (without mounting test)

(Can only be issued if the handlebars can be fitted without further modifications).

The motorcycle is listed for the handlebars:

No fitting test necessary, the ABE must be carried.

The motorcycle is not listed for the handlebars:

Acceptance as under point 1.

Many testing organizations also accept an attachment test as under point 3.

If several items are combined (handlebars, risers, brake lines, etc.), an installation test must always be carried out in accordance with § 19/2.

Options of manufacturing

We are your powerful partner for the development and production of articles made from bended tubes, also in small series from 25 or 50 pieces (No one-off production).

Special for tubes with 12, 14, 16, 18, 22, 25, 25,4 (1"), 30, 31,75 (1¼"), 32 and 38 (1 ½") mm Ø and rounded flat steel in 15, 20, 25, 30, 35 and 40 mm width we have a large stock from tools and material.

For all articles we can make a high-brilliant nickel and chromium plating in our own galvanisation. Alternatively powder coating in RAL colors is possible.

We are certified in pursuance of DIN EN ISO 9001.

Tube bending works from steel-roundtubes on

2 CNC mandrel bending machines up to 42 mm Ø, 1 x right- 1 x left-bending
1 CNC mandrel bending machine up to 42 mm Ø with freeform bending device,
several tool levels, right and left bending

Tube end forming up to 40 mm Ø x 100 mm lengths

for example ring-shapes, widening, reduction,
insert from nuts or turned parts

Rotary swaging up to 35 mm Ø and 350 mm lengths

for tapering of tubes

Punching and pressing up to 50 t.

Brazing (Gasflux-process)

Gas-shielded welding (MIG/MAG and WIG)

Orbital welding (WIG up to 40 mm Ø)

High precise plasmacutting (up to 20 mm)

from steel, stainless steel and aluminium
also in combination with drilling and thread cutting

Sheet Metal Processing CNC controlled press brake up to 35 to.

Storage and shipping

We can handle by appointment for you

Nickel and chromium plating (also in subcontracting)

of rack goods from steel, brass, copper, stainless steel and aluminium
by maximum measures of 950 x 750 x 300 mm.

If you are interested we are expecting your request.

Price- and Shipping Information

Prices incl. 19% tax are valid in Germany for private customers and in the EU for all customers without VAT number.

Prices without tax are valid in Germany for trade, handicraft and business, in the EU for all customers with VAT number and for all customers outside EU.
